PORTFOLIO MANAGEMENT SYSTEM

BY
LAKSHMI NARAYANAN D
ABIRAMI J

The Portfolio Management System is a financial application built using React, FastAPI, PostgreSQL. It integrates the Unified Security Master (USM) and Asset Class service to manage securities, asset classifications, portfolios, holdings, analytics, and historical market data. The system provides benchmark comparison, portfolio performance tracking, asset-class and rebalancing, simulated BUY/SELL execution, and portfolio alerts.
